

# BRUSHES FROM FALU RÖDFÄRG FOR THE BEST RESULTS

## WASHING BRUSH

Falu Rödfärg Washing Brush is a handy steel brush for small or hard-to-reach areas. Made from high-quality stainless bristles, it has carefully chosen stiffness, gentle on wooden panels and fibers, yet strong enough to remove old paint effectively. Perfect for vertical lock panels, window frames, and bargeboards, for example.

## STEEL BRUSH

Falu Rödfärg Steel Brush is also made for brushing facades previously painted with Falu Rödfärg or similar alternatives. The brush is made of stainless steel and features carefully chosen stiffness, gentle on wooden panels and fibers but strong enough to effectively remove old paint. Many other steel brushes on the market can be too aggressive, potentially damaging the wood and tearing up fibers when removing pigmented paint. By using the Falu Rödfärg Steel Brush, you get a brush that is both effective and gentle. The width is 200 mm, suited for reaching between battens. It is prepared for easy attachment of an optional handle.

## STEEL FIBER BRUSH

Falu Rödfärg Steel Fiber Brush is designed for brushing facades previously painted with Falu Rödfärg or similar alternatives. The brush has carefully selected bristle stiffness, gentle on the wooden panels and their fibers, yet strong enough to effectively remove old paint. A stable and wide brush crafted to efficiently clean large surfaces, such as agricultural buildings.
